

# CASE STUDY: CLOUD PHONES

A FLEXIBLE, COST EFFECTIVE PHONE SOLUTION FOR EVERYONE

“We only realized the problems that our old phone system had been giving us when we started using the cloud phone system. There is no more running around trying to find each other or having to get to a landline to take a call. If someone is out on the course or away from the clubhouse we can just transfer the call to their mobile device.”  
- Barrie McWha, Sparwood Golf Club

**Problem:** Sparwood Golf Club was managing things using an old analog phone system and one cordless phone. With staff needing to be out and about and contactable at all times things just weren't working.

**Solution:** A Cloud Phone System. Cloud phone systems are the first solution that really brings the features big businesses are used to, to smaller organizations. It is a low cost option with no need to invest in expensive hardware, exchanges, a receptionist to transfer calls. This solution provided extension calling, smart phone apps, intercom, voicemail to email and fax integration.

**Benefits:** Staff at the golf club are now connected wherever they are and whenever they need to be and the cost is comparable to a basic phone system. Transferring calls to people away from the office is easy even if it is to a mobile device, voicemail can be accessed anytime anywhere and business can be easily conducted away from the office.
